

RUSSIAN RIVER FRIENDLY

LANDSCAPING

Russian River-Friendly Landscaping **at Home**

Environmentally friendly residential landscaping practices

Transform your lawn

Plant a beautiful landscape that saves water and promotes biodiversity.

Dispose of green waste properly

Don't send plant debris to the landfill; compost green waste on site or use a green waste bin.

Select Russian River-Friendly plants

Choose low water use plants that will thrive in your environment without the use of synthetic fertilizers.

Check your irrigation system

Repair leaks and adjust your watering schedule to reflect your plants' seasonal water needs.

Use compost to amend the soil

Foster a fertile, diverse, and disease-suppressive soil by applying compost.

Capture rainwater

Save drinking water, and reduce your water bill, by irrigating with rainwater.

Mulch regularly

Keep mulch three inches thick to prevent water loss and build healthy soil.

Every landscape can have a beneficial impact on the river and surrounding environment.
